## About Syrinix

Syrinix is an award-winning leader in providing intelligent pipeline monitoring solutions.

For over 12 years Syrinix has been leading the way in the development and delivery of a suite of monitoring solutions, providing utilities with the information they need, when they need it, to manage and calm their networks effectively.

By combining high resolution data with automated analysis and alerts, utilities are now able to increase the resilience of their networks, including reducing leakage and breaks and extending asset lifetimes, all while lowering operating costs.

## FEATURES AND SPECIFICATIONS

### ESSENTIAL PRESSURE AND FLOW LOGGING FOR TRANSFORMED NETWORK MANAGEMENT

DATA LOGGING

ADVANCED INSIGHTS

LEAK REDUCTION

**PIPEMINDER-S** transforms the way utilities manage their networks by providing data for informed decision making, extending asset lifetimes and reducing leaks and breaks.

Delivering 24/7 high resolution pressure and flow data with a **5 year battery life**, **PIPEMINDER-S** is a compact IP68 rated logging device. Extending the functionality of a standard logger with optional, sophisticated analytics, **PIPEMINDER-S** provides basic data reporting plus visibility of pressure transients, negative pressure spikes, breaks and other network stresses that are invisible with lower resolution monitoring.

**PIPEMINDER-S** intentionally provides alerts and high resolution data only when needed, avoiding data overload. Combining significant functionality into one device allows users to avoid the costs of purchasing both basic and more advanced solutions separately. With **PIPEMINDER-S**, users can choose one device that provides exactly the insights needed.

\*Dependant on configuration, figure based on default settings

**PIPEMINDER-S** integrates into **RADAR**, Syrinix's cloud based portal for data analysis. Available online on any device, **RADAR** is powerful yet easy to use, providing rich data analysis and reporting.

Along with automated email or SMS alerts for critical events, **RADAR** can also export data via FTP into your SCADA systems.
